Pre-TOEFL Guide Dec 19 2019 Preparing for TOEFL Do you plan to take TOEFL or IELTS but are not ready for the challenge? Do you need more practice? If you do, then this book is for you. It is also for those who just want to practice their academic English. Whatever your purpose, this book will give you the foundation in academic English you need for TOEFL and IELTS success. Part I: Argument Strategies In this section, you will learn how to argue subjectively and objectively in writing and when speaking. You will also learn how to summarize. Being able to argue and summarize proficiently is essential for TOEFL and IELTS success, and for success at an English-speaking university. Part II: Academic English Practice This section consists of grouped exercises. They are Structure, Written Expression, and Vocabulary. These challenging exercises will help you build an academic English vocabulary while introducing you to English grammar at the university level.

International Handbook of Metacognition and Learning Technologies Jun 24 2020 Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area. Rich in theoretical models and empirical data, the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in multimedia, hypermedia, microworlds, and other platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology

covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning. Identifies features designed to study or support metacognitive/SRL behaviors. Reviews how its specific theory or model addresses learners' metacognitive/SRL processes. Provides detailed findings on its effectiveness toward learning. Discusses its implications for the design of metacognitive tools. Examines any theoretical, instructional, or other challenges. These leading-edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.

Nonlinear PDEs: A Dynamical Systems Approach May 24 2020 This is an introductory textbook about nonlinear dynamics of PDEs, with a focus on problems over unbounded domains and modulation equations. The presentation is example-oriented, and new mathematical tools are developed step by step, giving insight into some important classes of nonlinear PDEs and nonlinear dynamics phenomena which may occur in PDEs. The book consists of four parts. Parts I and II are introductions to finite- and infinite-dimensional dynamics defined by ODEs and by PDEs over bounded domains, respectively, including the basics of bifurcation and attractor theory. Part III introduces PDEs on the real line, including the Korteweg-de Vries equation, the Nonlinear Schrödinger equation and the Ginzburg-Landau equation. These examples often occur as simplest possible models, namely as amplitude or modulation equations, for some real world phenomena such as nonlinear waves and pattern formation. Part IV explores in more detail the connections between such complicated physical systems and the reduced models. For many models, a mathematically rigorous justification by approximation results is given. The parts of the book are kept as self-contained as possible. The book is suitable for self-study, and there are various possibilities to build one- or two-semester courses from the book.

Mastering Visual Studio .NET Jul 06 2021 Mastering Visual Studio .NET

provides you, as an experienced programmer, with all the information needed to get the most out of the latest and greatest development tool from Microsoft®. It doesn't matter if you're an MFC, C++, STL, ATL, COM, Win32, Visual Basic, C#, HTML, XML, ASP.NET, database, web application, Web service, NT service, stand-alone client, or component programmer targeting Windows® or one of the Windows variants (i.e. Windows CE or the PocketPC) -- this is the book that will help you master the toolkit. Written by experienced developers and trainers John Flanders, Ian Griffiths, and Chris Sells, Mastering Visual Studio .NET begins with fundamental information about maximizing the power of Visual Studio .NET as it comes out of the box, including the following topics: projects and solutions files and the various file editors debugging web projects database projects setup projects To experience the full spectrum of functionality and extensibility, Mastering Visual Studio .NET provides you with the practical depth and detail needed to best put these features to work. The second section of the book is about extending VS.NET to suit your specific needs: integrating controls and components with VS.NET the VS.NET automation object model macros and add-ins custom wizards the Visual Studio Integration Program (VSIP) If you're serious about using the VS.NET toolkit, you'll want a book of this magnitude close by. Mastering Visual Studio .NET will take you beyond what you'll read in the standard documentation by offering hints and recommendations that the authors and the community at large have found to be useful after many years of experience.

Computer Science – Theory and Applications Apr 22 2020 This book

constitutes the proceedings of the 13th International Computer Science Symposium in Russia, CSR 2018, held in Moscow, Russia, in May 2018. The 24 full papers presented together with 7 invited lectures were carefully reviewed and selected from 42 submissions. The papers cover a wide range of topics such as algorithms and data structures; combinatorial optimization; constraint solving; computational complexity; cryptography; combinatorics in computer science; formal languages and automata; algorithms for concurrent and distributed systems; networks; and proof theory and applications of logic to computer science.

Decomposition of Alloys: The Early Stages Sep 27 2020  
Decomposition of Alloys: The Early Stages contains the proceedings of the 2nd Acta-Scripta Metallurgica Conference held in Sonnenberg, Germany, on September 19-23, 1983. Contributors discuss the early stages of decomposition in alloys, placing emphasis on the unsolved problems of the field, rather than on the solved ones. This book has 36 chapters and opens with a discussion on developments in the theory of the kinetics of first-order phase transitions, followed by an analysis of metastability and spinodal nucleation; neutron scattering during decomposition of aluminum alloys; Ostwald ripening of precipitates; and phase stability under irradiation. The next chapters explore decomposition processes in Al-Zn alloys; thermal decomposition in Cu-Ni-Fe alloys; and the initial stages of discontinuous precipitation reactions. Other papers focus on the mechanisms of plate precipitate growth; spinodal decomposition and continuous ordering; and early stages of decomposition in Ni-Al single crystals. This monograph will be of interest to students and practitioners of physics and metallurgy.
